

4 ways isolated programmable signal converter DAT 5022

FEATURES

- Input for voltage and current signal
- Input range configurable by DIP-switches
- Two independent output channels
- Voltage or current outputs configurable by DIP-switches
- Isolated power supply source for passive current transmitter on input
- Isolated power supply source for passive loads on outputs
- Galvanic isolation at 2000 Vac between input, power supply and outputs
- Good accuracy and performance stability
- EMC compliant – CE mark
- DIN rail mounting in compliance with EN-50022 and EN-50035

GENERAL DESCRIPTION

The converter DAT 5022 is designed to provide on its output two voltage or current signals proportional with the value of the normalised signal applied on its input.

The user can program the input and outputs ranges by the proper DIP-switches available after opening the suitable door located on the side of device (see "Input ranges table" and "Outputs ranges table" sections).

The regulation of Zero and Span values is made by the ZERO and SPAN potentiometers located on the top of device.

The 2000 Vac isolation between input, power supply and the outputs eliminates the effects of all ground loops eventually existing and allows the use of the converter in heavy environmental conditions found in industrial applications.

The DAT 5022 provides on the input side an auxiliary supply source to connect both active and passive current loops.

Moreover it provides on each output side an auxiliary supply source to connect both active and passive loads.

It has been made in compliance with the EEC/336/89 standard on the Electromagnetic Compatibility.

It is housed in a plastic enclosure of 12.5 mm thickness suitable for DIN rail mounting in according to EN-50022 and EN-50035 standards .

OPERATIVE INSTRUCTIONS

The converter DAT 5022 must be powered by a direct voltage included in the 18 V to 32 V range. The power supply must be applied between the terminals Q (+Vdc) and R (GND).

The output 1 connections must be made as shown in the section "Output 1 connections".

Voltage output: between the terminals L (Out1) and G (Out1 GND); **passive current output:** between the terminals L (Out1) and G (Out1 GND) for the sink currents; **active current output :** between the terminals I (Aux supply 1) and L (Out1) for the source currents.

The output 2 connections must be made as shown in the section "Output 2 connections".

Voltage output: between the terminals F (Out2) and H (Out2 GND); **passive current output:** between the terminals F (Out2) and H (Out2 GND) for the sink currents; **active current output :** between the terminals E (Aux supply 2) and F (Out2) for the source currents.

The input connections must be made as shown in the section "Input connections".

Voltage input: between the terminals N (Input V) and P (Input GND); **passive current input:** between the terminals O (Input I) and P (Input GND) for the sink currents; **active current input** for the source current (for example coming from a passive transmitter) : between the terminals M (Aux supply) and O (Input I).

The configuration of input and output ranges is made by DIP-switches; the output channels can be set independently (refer to the section "Input ranges table" and "Outputs ranges table").

After the converter configuration, it is necessary to calibrate it using the ZERO and SPAN regulations; this operation is illustrated in the section "DAT 5022: Configuration and calibration". To install the device refer to the section "Installation instructions".

TECHNICAL SPECIFICATIONS (Typical @ 25 °C and in nominal conditions)

Input	
Signal type (configurable)	Current: 4 ÷ 20 mA, 0 ÷ 20 mA, Voltage: 0÷10 V, 2÷10 V, 0÷5 V, 1÷5 V
Input impedance	Voltage: >/= 1 MΩ, Current: ~ 50 Ω
Auxiliary supply (Aux. supply)	18 Vdc min @ 20 mA
Output 1 & 2	
Signals type (configurable)	Current: 4 ÷ 20 mA, 0 ÷ 20 mA, Voltage: 0÷10 V, 2÷10 V, 0÷5 V, 1÷5 V
Zero regulations	± 5 % min.
Span regulations	± 5 % min.
Load resistance (Rload)	Current output: </= 500 Ω, Voltage output: >/= 5 KΩ
Auxiliary supplies (Aux. Supply 1 & 2)	12 Vdc min @ 20 mA
Performances	
Calibration error	± 0.1 % of f.s.
Linearity error (*)	± 0.05 % of f.s.
Thermal drift	0.02 % of f.s./°C
Response time (from 10 to 90 % of f.s.)	< 10 ms
Power supply voltage (**)	18÷32 Vdc
Current consumption(***)	Current output: 120 mA max. Voltage output: 70 mA max.
Electromagnetic Compatibility (EMC) (for industrial environments)	
Isolation voltage	Immunity: EN 61000-6-2; Emission : EN 61000-6-4 2000 Vac, 50 Hz, 1 min.
Operating temperature	-20 ÷ 60 °C
Storage temperature	- 40 ÷ 85 °C
Relative humidity (non cond.)	0 ÷ 90%
Weight	approx. 90 g
(*) inclusive of hysteresis and power supply variation. (**) internally protected against polarity reversion. (***)Current: with both input and outputs Auxiliary supplies operative; Voltage: with input Auxiliary supply operative.
